

# Victor Frankenstein

## Doctor

### Motivations:

- Fear of failure
- Monetary reward
- Recognition
- Status

### Pain points

- Stakeholder management and workplace isolation
- Post-launch dread
- Navigating difficult conversations

### Tasks

- Collaborating with colleagues
- Gathering requirements for future experiments
- Roadmapping project plans
- Observing and facilitating experimental research
- Science and philosophy thought leadership

### Technology and learning

- Spends a lot of time in the lab experimenting with new technologies
- Reads a lot of reference material and practises new methods in live research sessions

Solitary, bipolar, dutiful, heroic

### Learning goal:

"As an aspiring fellow of the Royal Society, I need a way to better demonstrate active listening skills in my interactions with stakeholders so that I can lead improved risk mitigation and planning, pivot smoothly mid-project, have improved collaboration with colleagues, champion diverse sets of ideas, and drive valuable outcomes."
